CT PLANTER

Water needs to be allowed to drain away to prevent the planter from being filled. Townscape CT Concrete Planters VED/0044179PLT are manufactured with 4 x 70mm diameter drainage holes to help with this process. To ensure the water has somewhere to go a gully pot or equivalent can be installed to collect and transport the water away. Alternatively having 200mm of granular material (or whatever depth is required to reach permeable ground) underneath the planter to ensure the water reaches permeable material would be sufficient to allow an escape route.
